DNA-directed DNA polymerase (EC 2.7.7.7) - hepatitis B virus (subtype ayw, patient
CiSpecies: hepatitis B virus, HBV
A.Variety: subtype ayw, patient B
CiSpace: 20-Peb-1995 #sequence_revision 22-Nov-1996 #text_change 09-Jul-2004
CiAccession: S20757
Filai, M.E.; Mazzoleni, A.P.; Balestrieri, A.; Melis, A.; Porru, A.
submitted to the EMBL Data Library, March 1992
A;Description: Sequence analysis of HBV genomes isolated from patients with HBsAg n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1379
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TTCTCATCTGCCGGACCGTGCACTTCGCTTCACCTCTGCACGTCGCATGGAGACCACC 1619

                                                                                                                                                                                                         The present sequence is encoded by the genome of an isolated strain of Hepatitis B virus designated human Hepatitis B virus (HBV) surface antigen-'S--133 Oon strain (Met to Thr). The viral genome is deposited as ECCC accession numbers P97121501 and P97121503. The nucleotide sequence was isolated from hepatocellular carcinoma (HCC). The nucleotide sequence encodes four overlapping proteins, which are a DNA polymerase, a large surface antigen differs from the wild type sequence in that it contains a Thr at position 133 of the wild type sequence in that it contains a Thr at position 133 of the wild type sequence in that it contains a Thr at position 133 of the wild type sequence in that it contains a Thr at position and the used for detecting the novel HBV strain. The HBV polypeptides can be used in hepatitis vaccines. The HBV novel strain polypeptides can be used to identify compounds for treating or preventing HBV infection or hepatocellular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            479
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            334

This invention relates to a method for the preparation of a viral antigen. The method involves processing the virus antigen in the presence of a peptidyl prolyl cis-trans isomerase (PPI). Preferably a surfactant, a reducer and a protein denaturant are also added. The method is used for immune diagnosis. The present sequence represents a Hepatitis b virus protein sequence used in the invention. (Updated on 06-AUG-2003 to correct OS field.)

The method consists of a step of reacting a molecular chaperone with a virus antigen. The virus antigen is useful for the preparation of immunoassy reagents. The present sequence is a viral protein, which was used in the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Preparation of viral antigen, especially hepatitis B, hepatitis C or HIV, for use as vaccine and in diagnostics, comprises reacting peptidyl prolyl cis-trans isomerase to the viral antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180 CTCACCAACCTCTTGTCCTCCAATTTGTCCTGGCTATCGCTGGATGTGTCTGCGGCGTTT 239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method (M) for the preparation of a viral antigen (I) comprising reacting (I) with peptidyl prolyl cis-trans isomerase (PPIsae). (I) has virucide, antinifiammatory, anti-HIV, anti-HIV, anti-HIV, anti-HIV, anti-HIV, anti-HIV, anti-hepatitis B, antihepatitis-C and hepatotropic activities. (I) is useful for immunodiagnostics, and as a vaccine. (I) has stronger antigenic activity than previously available antigens. Large quantities of viral antigen can be prepared by the simple process within a short culture period. The present sequence represents a synthetic adr type hepatitis B surface antigen, which is given in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method for the preparation of a recombinant hepatitis B virus surface antigen (HBs antigen) in which at least 23 amino acids from the N-terminal in a HBs antigen is deleted. The HBs antigen is useful for the preparation of reagents for immunoassay. The present sequence represents a HBs antigen which is used in the exemplification of the present invention

Hepatitis B virus surface antigen, HBsAgS.

Hepatitis B virus

WO2004002459-A1

(first entry)

22-APR-2004

```
containing four antigen sites of the S antigen of the hepatitis B virus surface antigen and a region encoding at least four amino acids forming the membrane-penetrating region. The invention also comprises a hepatitis B virus surface antigen prepared using this method. The method of the invention is useful for the preparation of immunoassay reagents. The present sequence represents the Hepatitis B surface antigen protein #3 of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            419

The present invention relates to a hollow nanoparticle, which comprises a protein, e.g. hepatitis B virus surface antigen protein, with modified cysteine residues. The nanoparticle specifically recognizes a target cell e.g. a liver cell. The nanoparticle is useful in methods for drug delivery. The present sequence is one such hepatitis B virus surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              119
